

Where Genetics Come First!

2026
WHEAT GUIDE

Thank you for considering Superior Seed as your wheat seed provider. We are committed to working with the top wheat genetic providers to identify the elite wheat varieties for our diverse growing environments in southern Indiana, western Ohio, and northern Kentucky.

We are also committed to bringing you the highest quality seed and seed treatment options. All of our wheat seed has been certified by Indiana Crop Improvement Association's Quality Assurance program and processed at our facility, so we can ensure only the highest quality seed is put into a Superior Seed bag.

Our commitment to your operation doesn't end at the close of the sale. We offer field scouting, agronomy service and follow-up through our sales and agronomy staff. We also work with professional wheat consultants to help maximize your yields.

Successfully yours,

S-2130 SR (Bearded)

Shining Star Early Maturity

This “early” addition to our wheat lineup is making a name for itself in its first year out. With its maturity, this variety gets its business done a few days earlier than the other varieties, without leaving bushels on the table. S-2130 is a medium statured plant with extreme tillering capabilities, making a wide plant style. If you are looking for a variety that is high yielding, that can be harvested a couple days earlier, to get those double-crop beans in the ground ahead of schedule, this is the top variety available for our area.

- Head scab Fhb1 gene resistance, excellent disease package
- Excellent standability, high-quality straw
- Huge top-end yield potential with very good test weight
- Could become the “new” double-cropping leader

STANDABILITY	1.5	
HEAD SCAB	1.5	
POWDERY MILDEW	2.0	
STRIPE RUST	1.5	

S-2230 SR (Bearded)

High Yielding Scab Resistant Variety Early-Medium Maturity

The head scab-resistant variety is an exciting addition to Superior Seed's already powerful lineup of top performing genetically diverse wheat offerings. Field trial testing over the past two seasons have been outstanding in the central and lower Midwest with a two-year average of 111% of the test average.

- Very exciting top-end yield potential yet offers a very strong disease package in a medium-statured plant designed for double cropping
- Excellent choice for those high-management acres and delivers top grain quality with extreme high test weight
- Provides solid defensive characteristics for those tougher acres while providing high-quality straw

STANDABILITY	1.5	
BARLEY YELLOW DWARF	1.8	
TEST WEIGHT	1.0	
STRIPE RUST	1.8	

S-2232 SR (Bearded)

Exciting Scab Resistant Variety

Early-Medium Maturity

We are excited to release this new SR variety to an already excellent line up of wheat varieties. This is a high performance line to be utilized as a companion to either S-2130 SR or S-2230 SR. S-2232 SR has phenomenal yield punch under high management and will increase your yield averages.

- A future lead variety with a 71% win-rate in 5 years of testing throughout the Midwest region. This high yielding variety has a place on every farm
- Excellent choice in a high management, planned double crop system. This variety is a medium statured plant with excellent standability
- Averages 105% above the mean in the regional testing. This variety also has excellent winter hardiness

STANDABILITY	1.5	
HEAD SCAB	1.5	
BARLEY YELLOW DWARF	2.0	
TEST WEIGHT	2.0	

Extreme WheatPak

Premium Fungicide Blend

With Insecticide

With Extreme WheatPak, wheat growers can rest easy knowing their seeds are protected with top-notch chemistries that work together to promote vigorous roots and strong stands.

Extreme WheatPak promotes effective seedling germination, systematic disease protection, healthy roots, robust stands, and more heads. It also offers the best-in-class Rhizoctonia activity available and enhanced protection against a broad spectrum of seed-borne, soil-borne, and fall foliar diseases.

Extreme WheatPak contains a high-rate fungicide, insecticide and plant enhancers stimulate growth and provide against 16 wheat seedling diseases and insects including Wheat Aphids, Wireworm, and Hessian Fly.
